

IDEAS

- ① Map bubbles sized by festival count; colour by genre cluster.
- ② State x Genre bubble matrix for composition
- ③ Leaderboard for top cities/regions
- ④ Australian Map
- ⑤ Annotations: 2-4 short callouts per panel
- ⑥ Festival Seasonality Pie Chart
- ⑦ Climate Sweet Spot for every Capital

COMBINE

1. Map + Season Bond
2. State x Genre Mix
3. Festival Seasonality
4. Capitals Leaderboard.

QUESTIONS

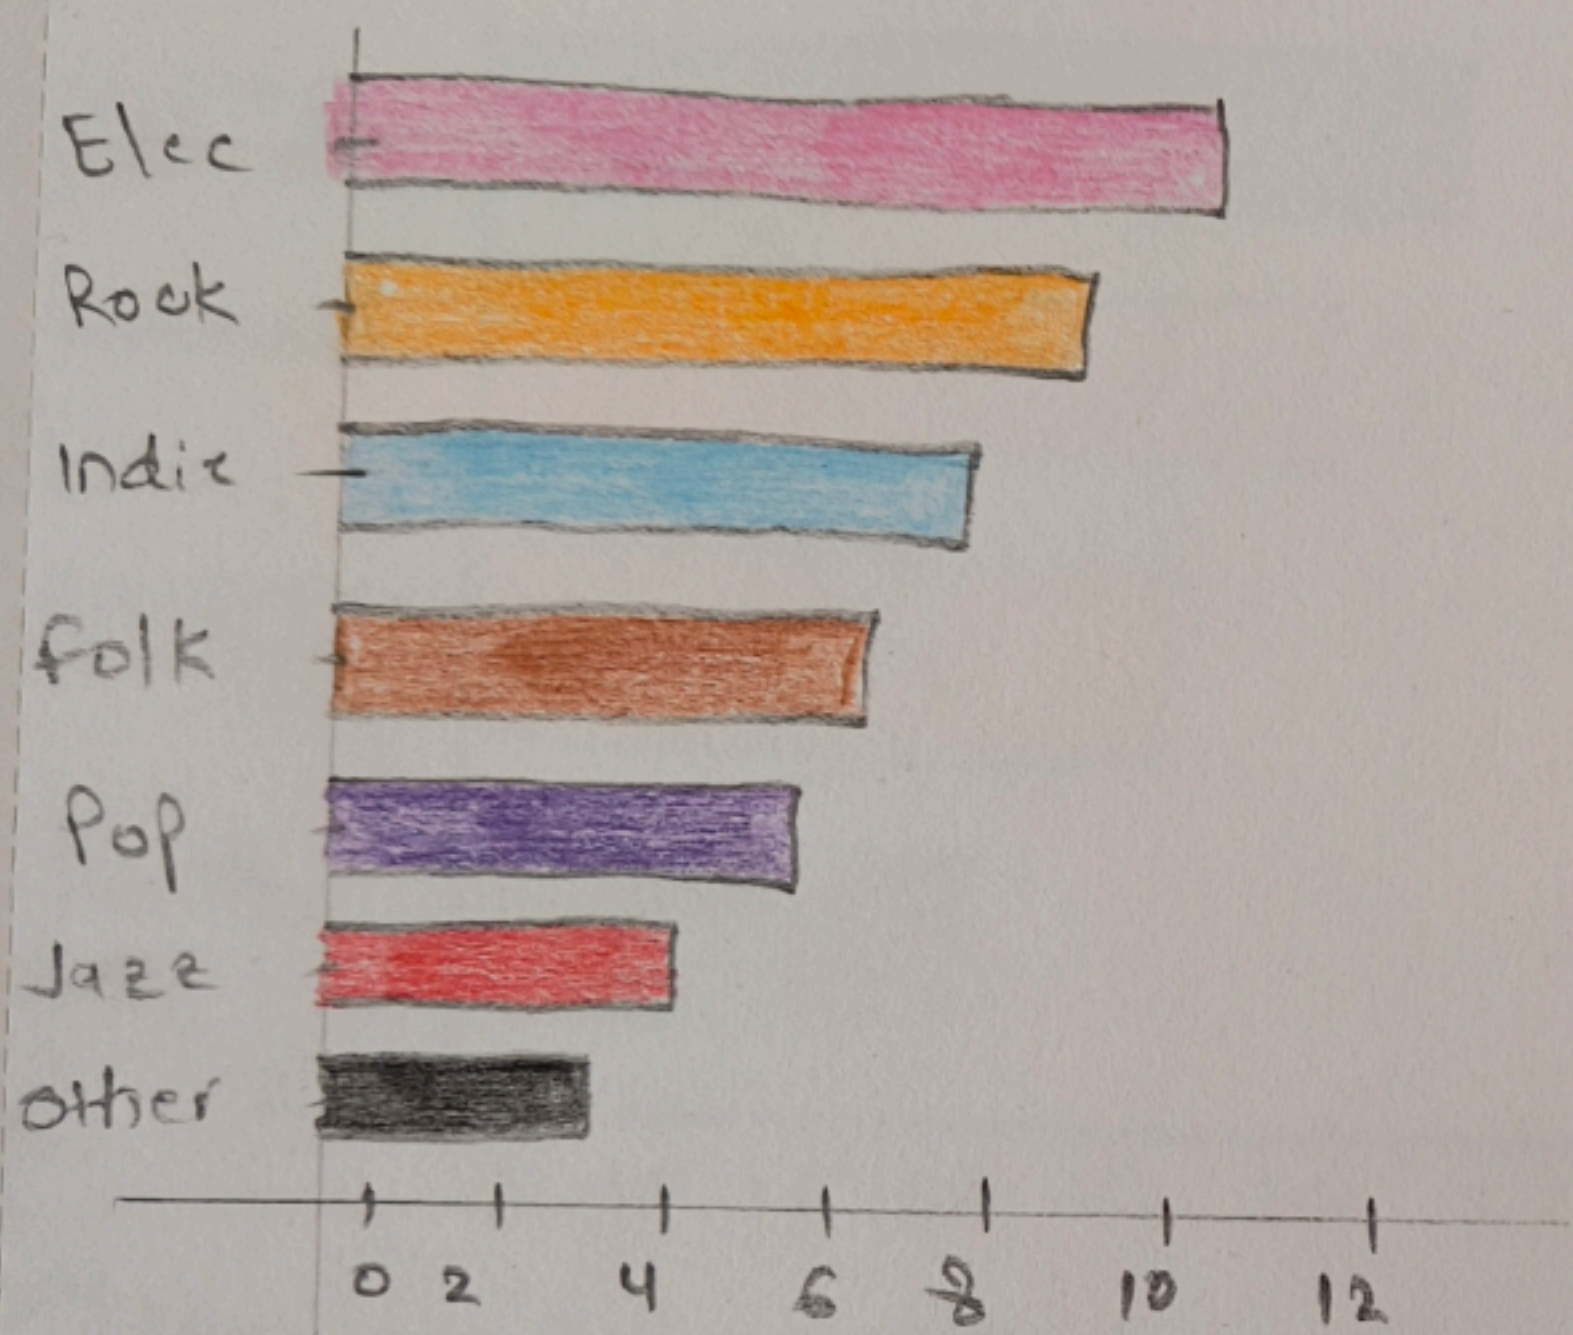

1. Do colors stay consistent across panels?
2. Is the story clear?
3. Is at least one map present and meaningful?

Sheet 1

Name: Alin

ID: 34624896

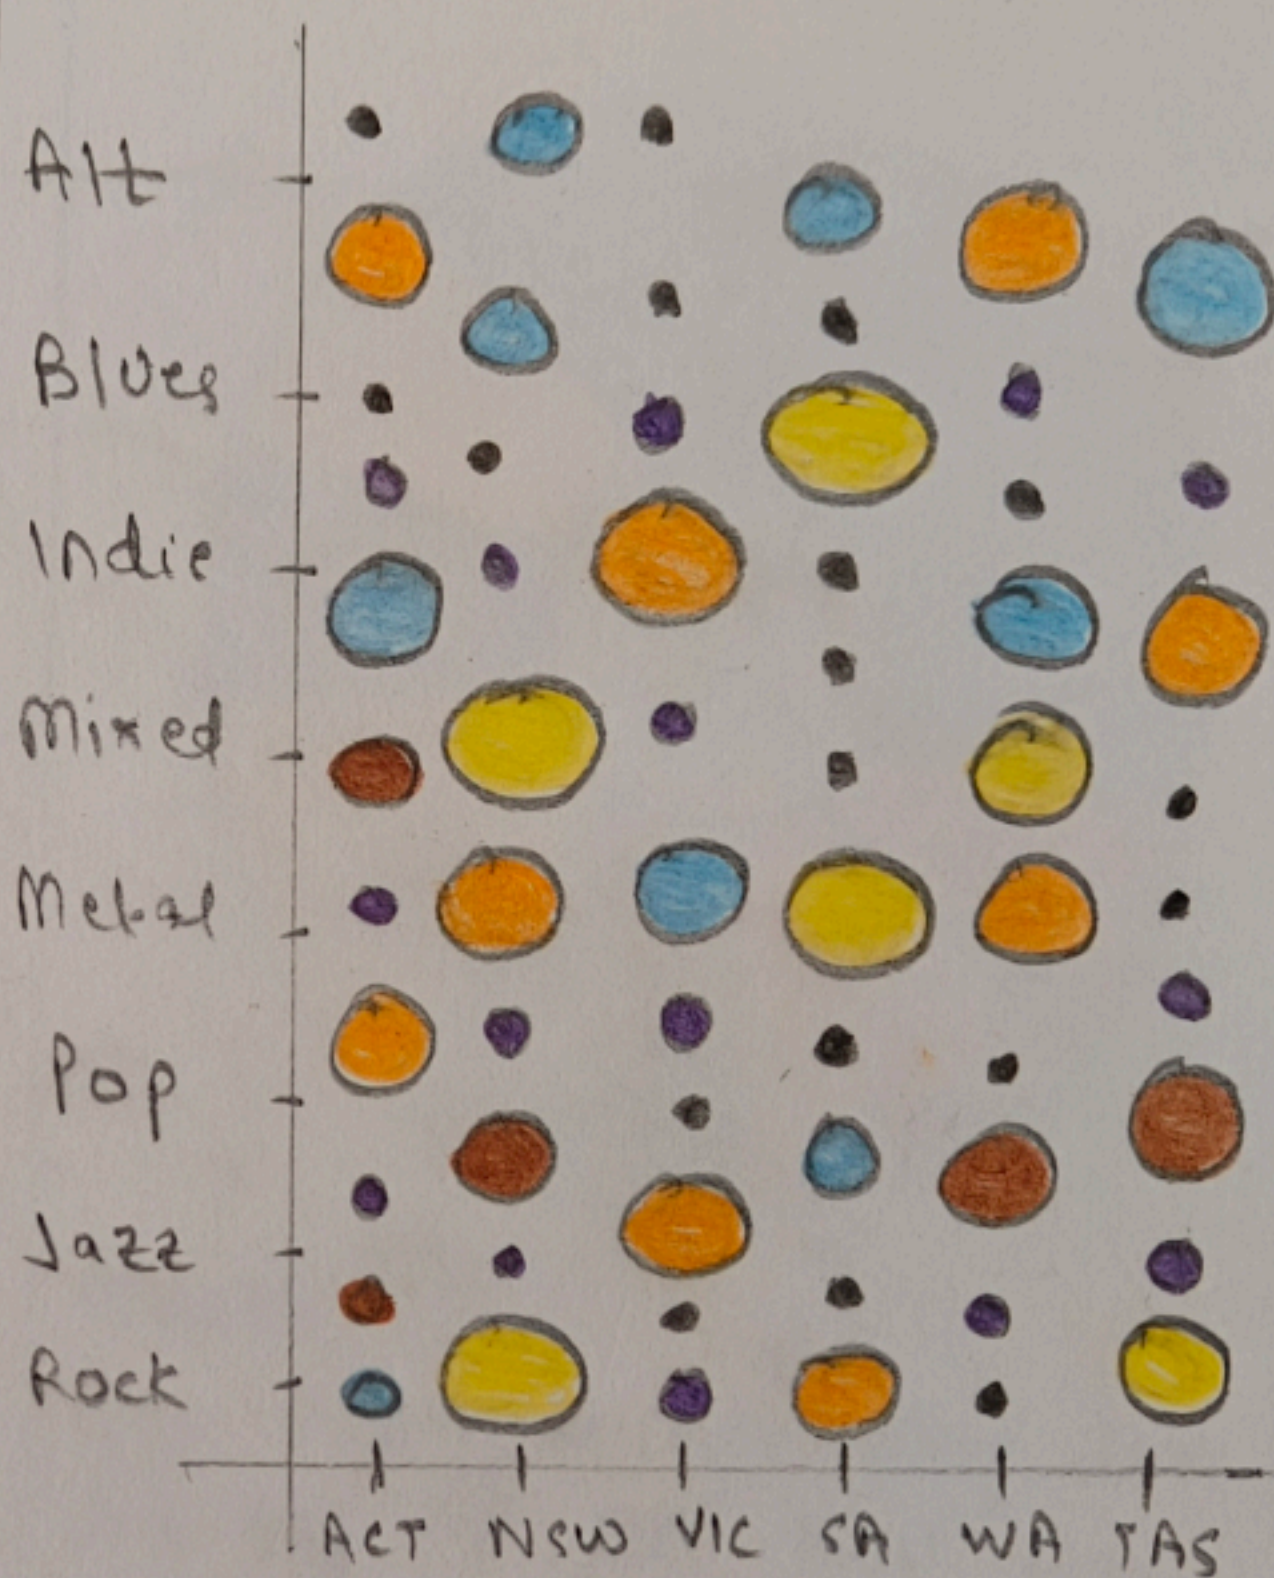

GENRE MIX

FOCUS: The core idea is: "Where are festivals, and when do they peak?"

DATASETS: aggregated counts by (state, genre-cluster, month)

BUBBLE MATRIX

FOCUS: Highlight different cultural mixes per state.

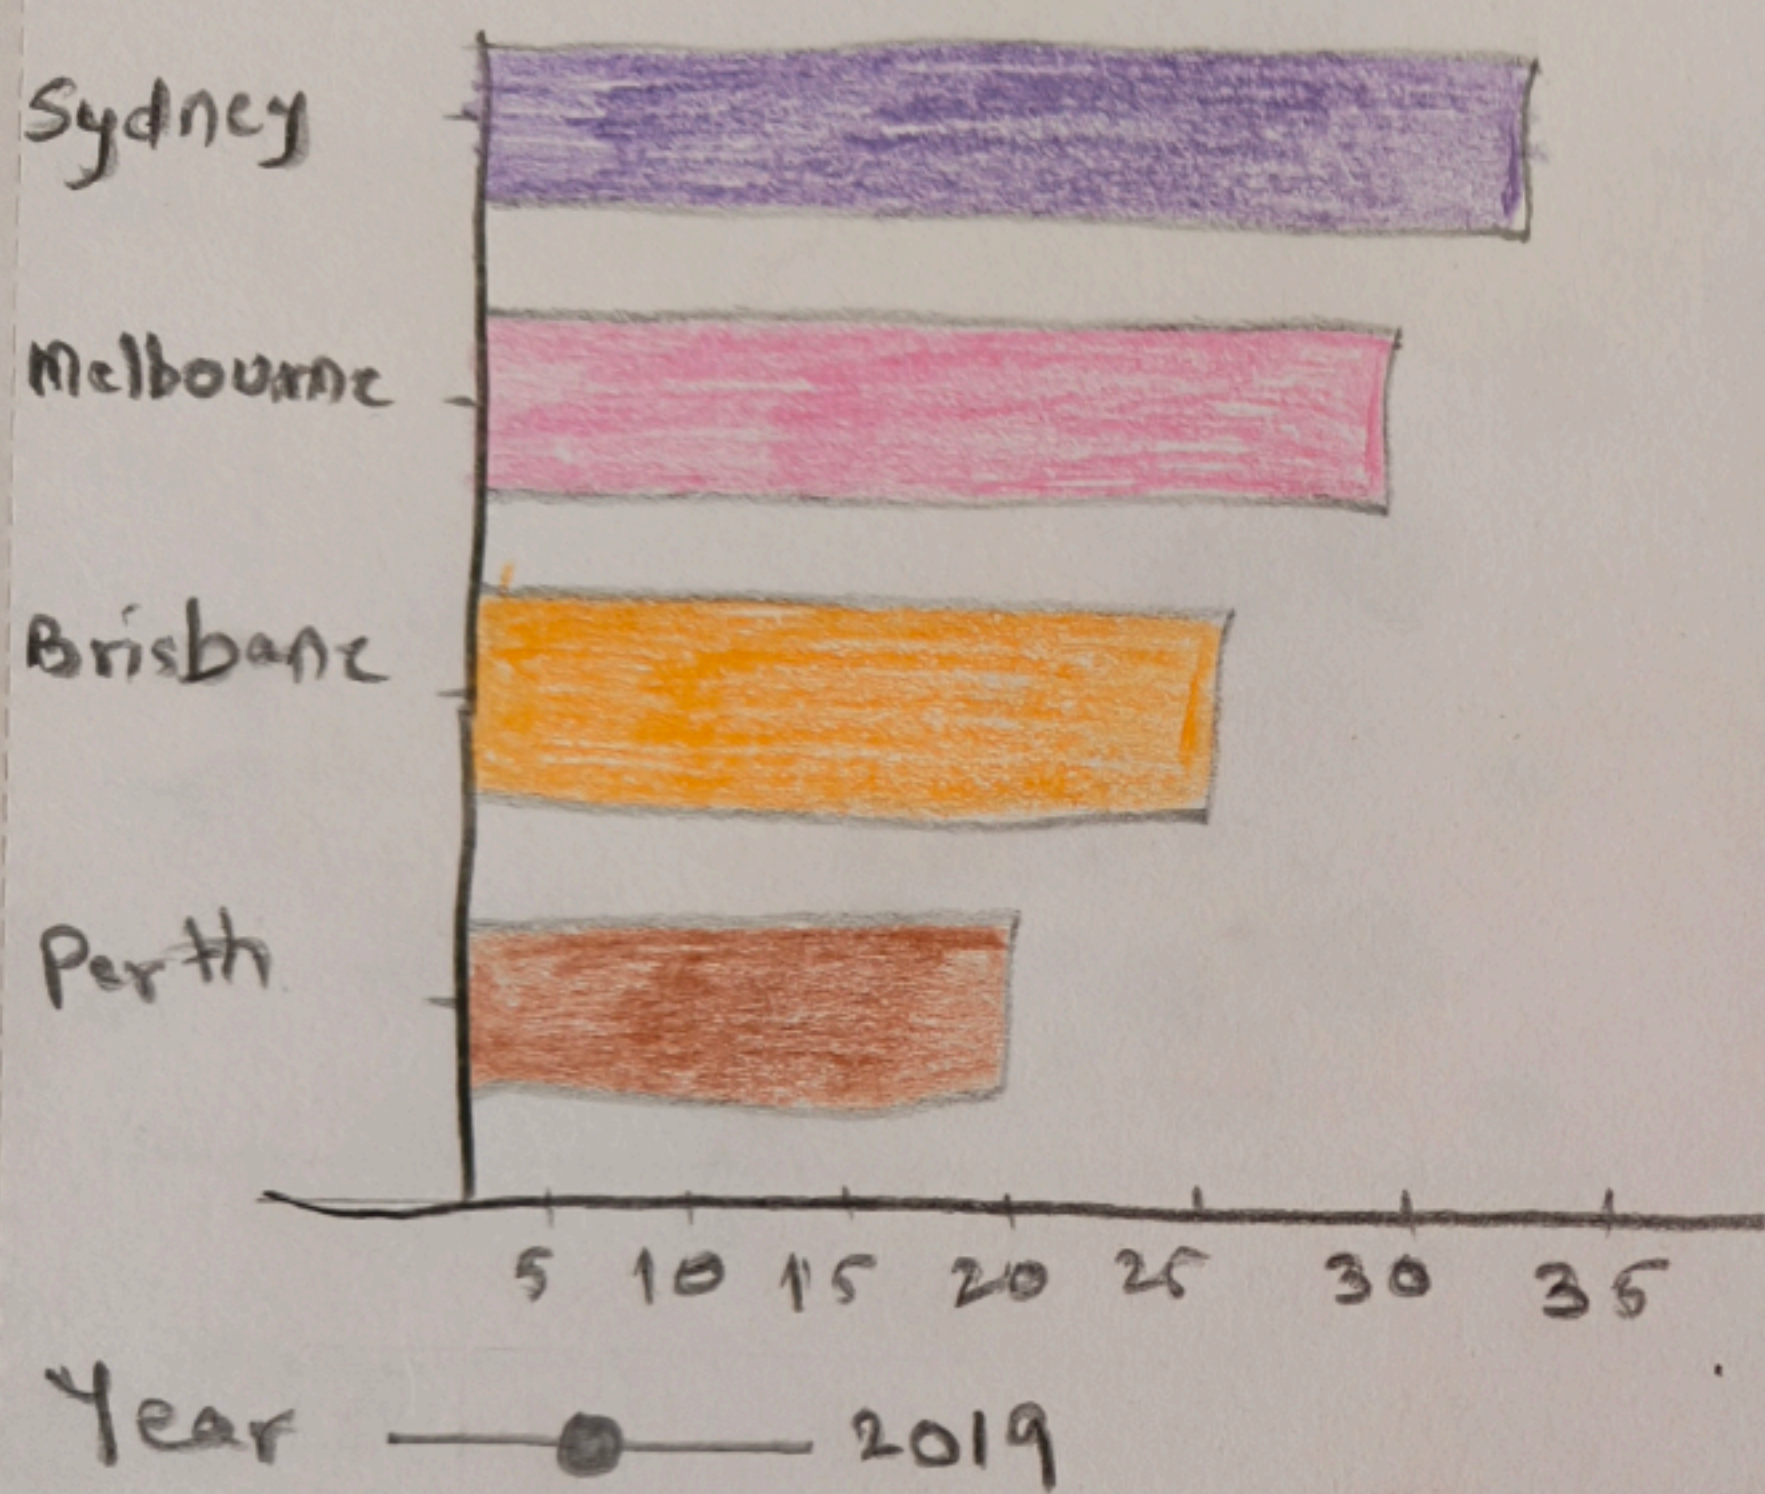

DATASET: counts by (state, genre-cluster)

Sheet 2

Name: Alin

ID: 34624896

LEADERBOARD

FOCUS: Australia's urban music year-by-year

DATASET: aggregated counts by (city, year, festival-count)

SEASONALITY

Month
Jan Feb Mar Apr May Jun
Jul Aug Sep Oct Nov Dec

FOCUS: Music cycle every month

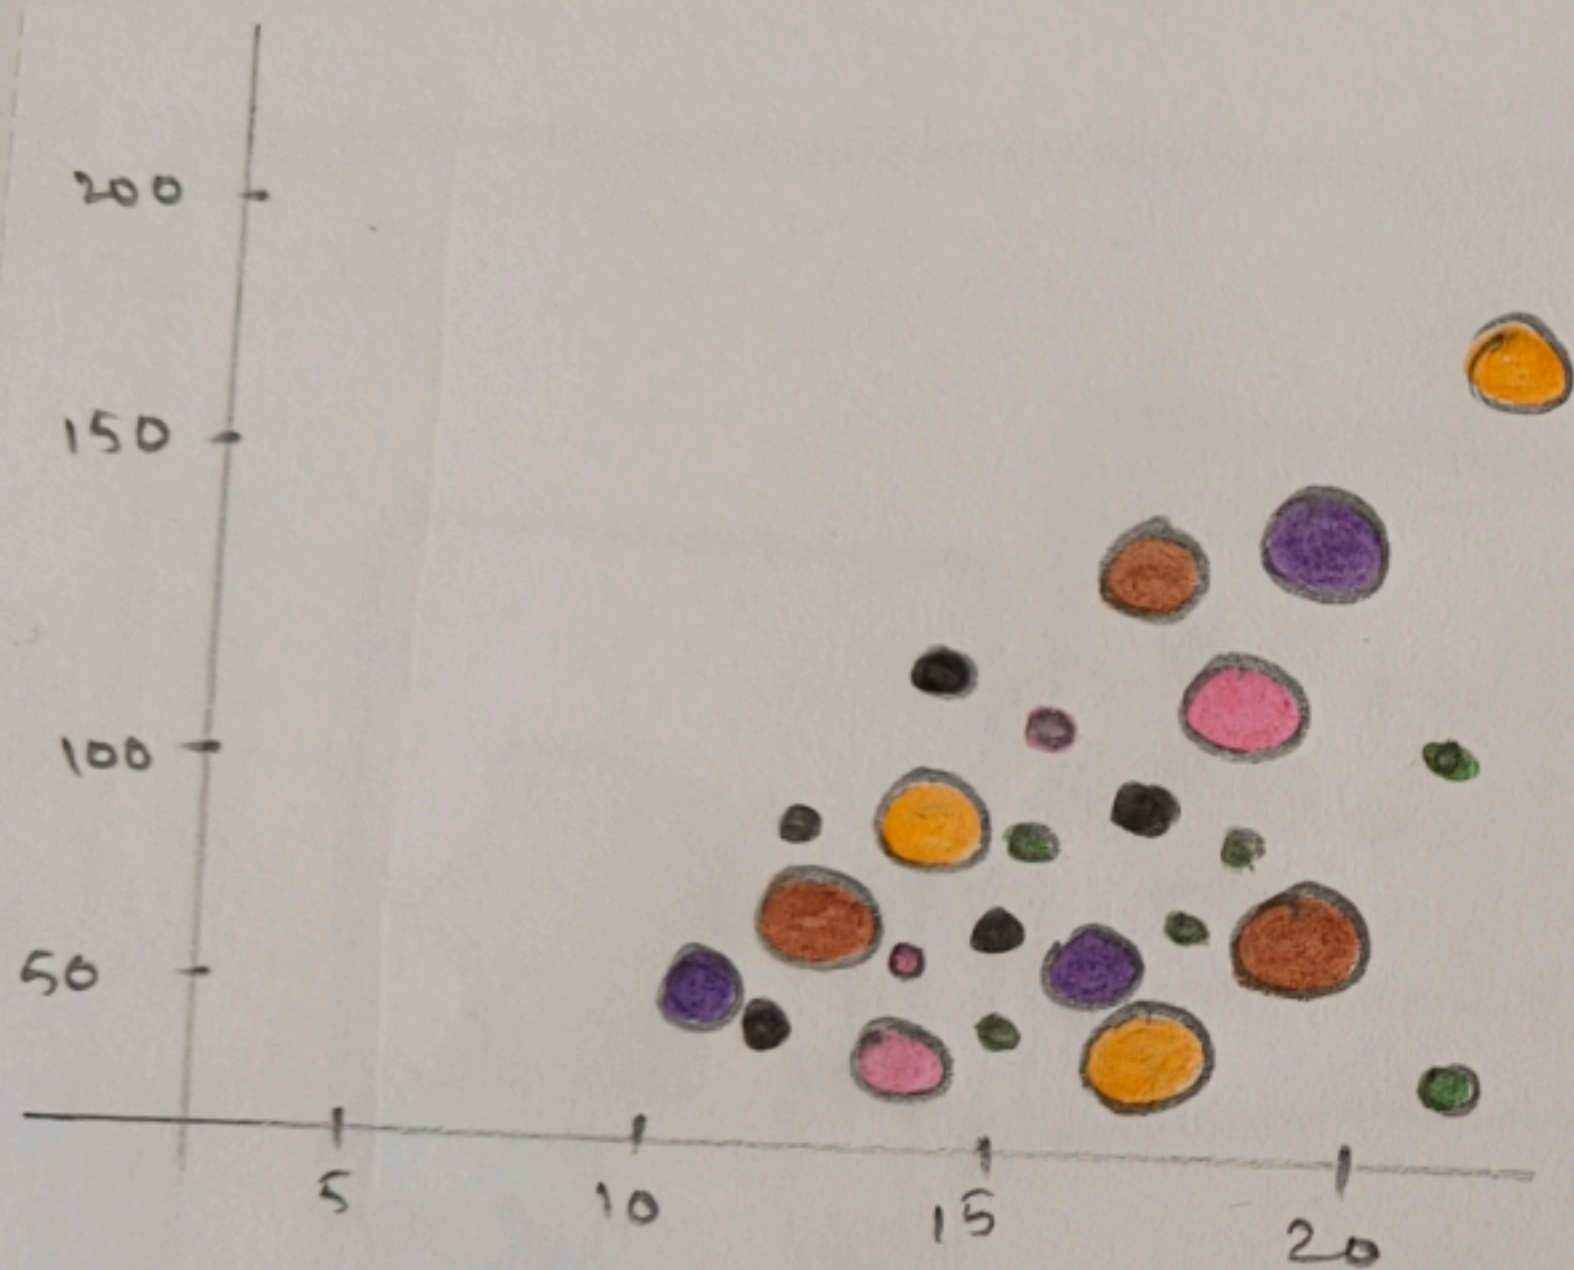

DATASET: counts by (month, festival-share)

Sheet 3

Name: Alin

IP: 34674896

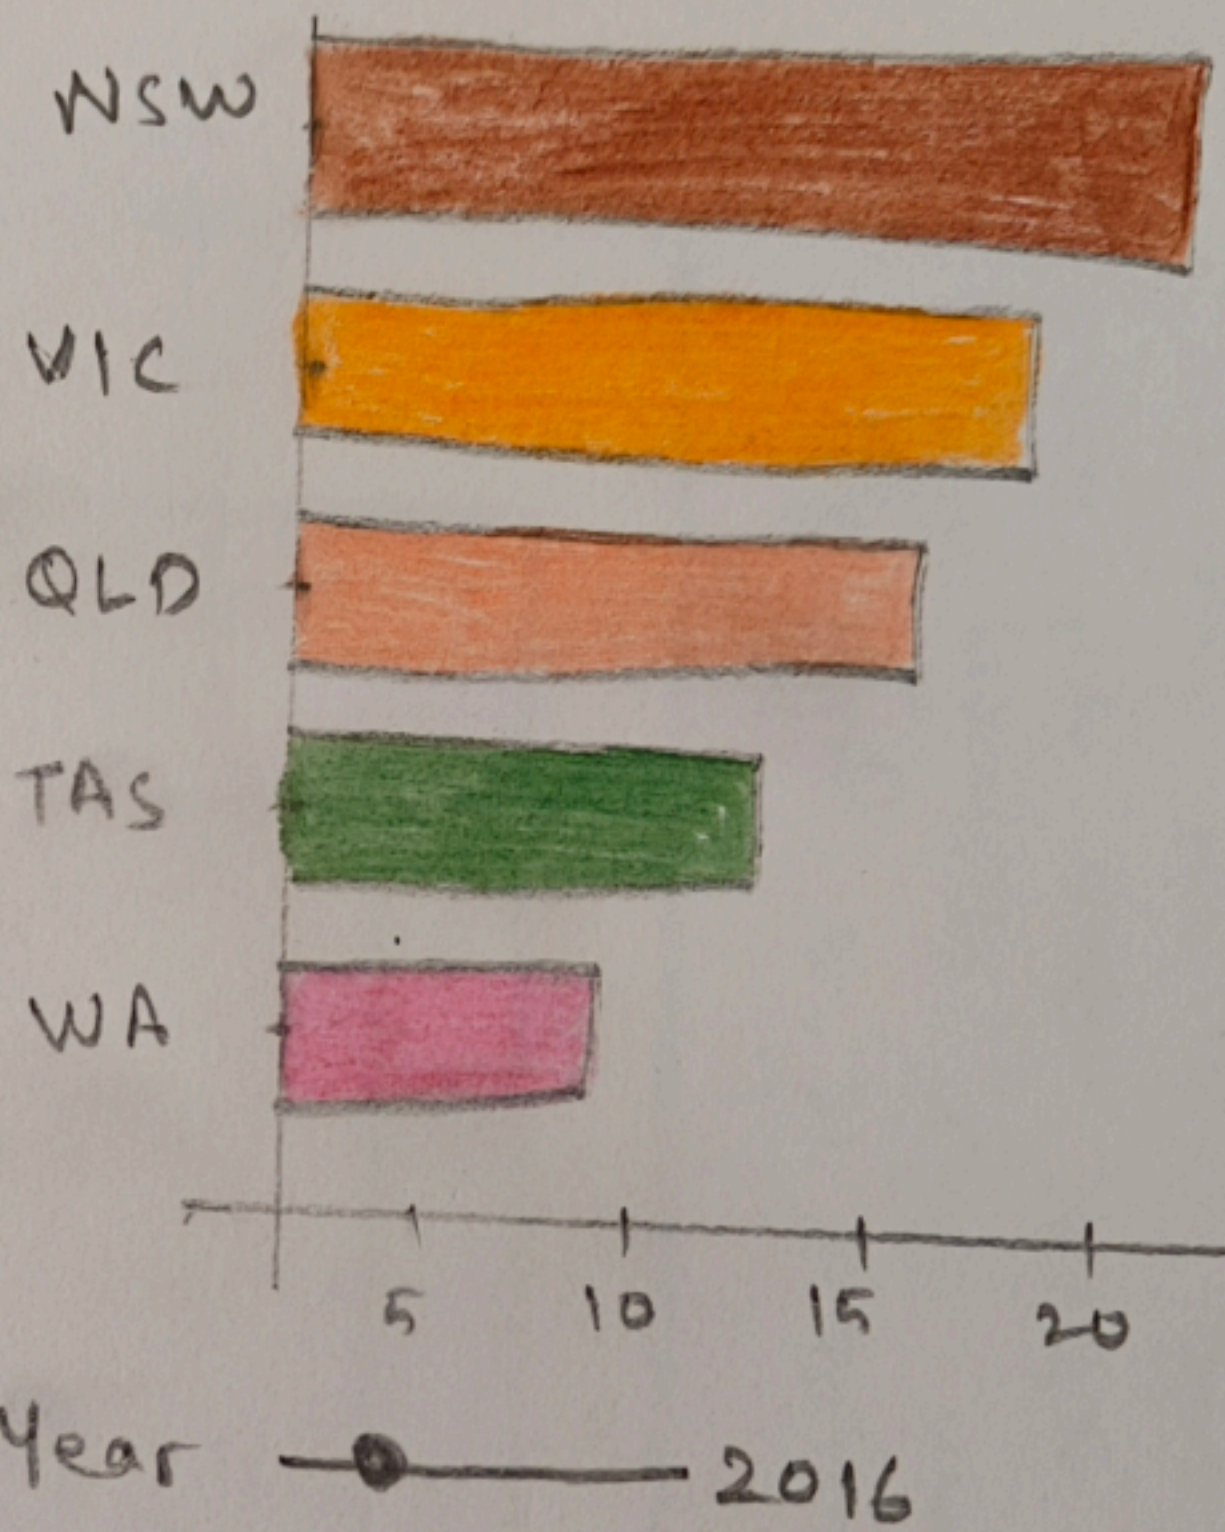

CLIMATE SPOT

FOCUS: Average Temperature of every city per month

DATASET: counts by (city, month)
(avg-temp, festival-share)

FESTIVAL RACE

FOCUS: Australia's live music evolved through the decade

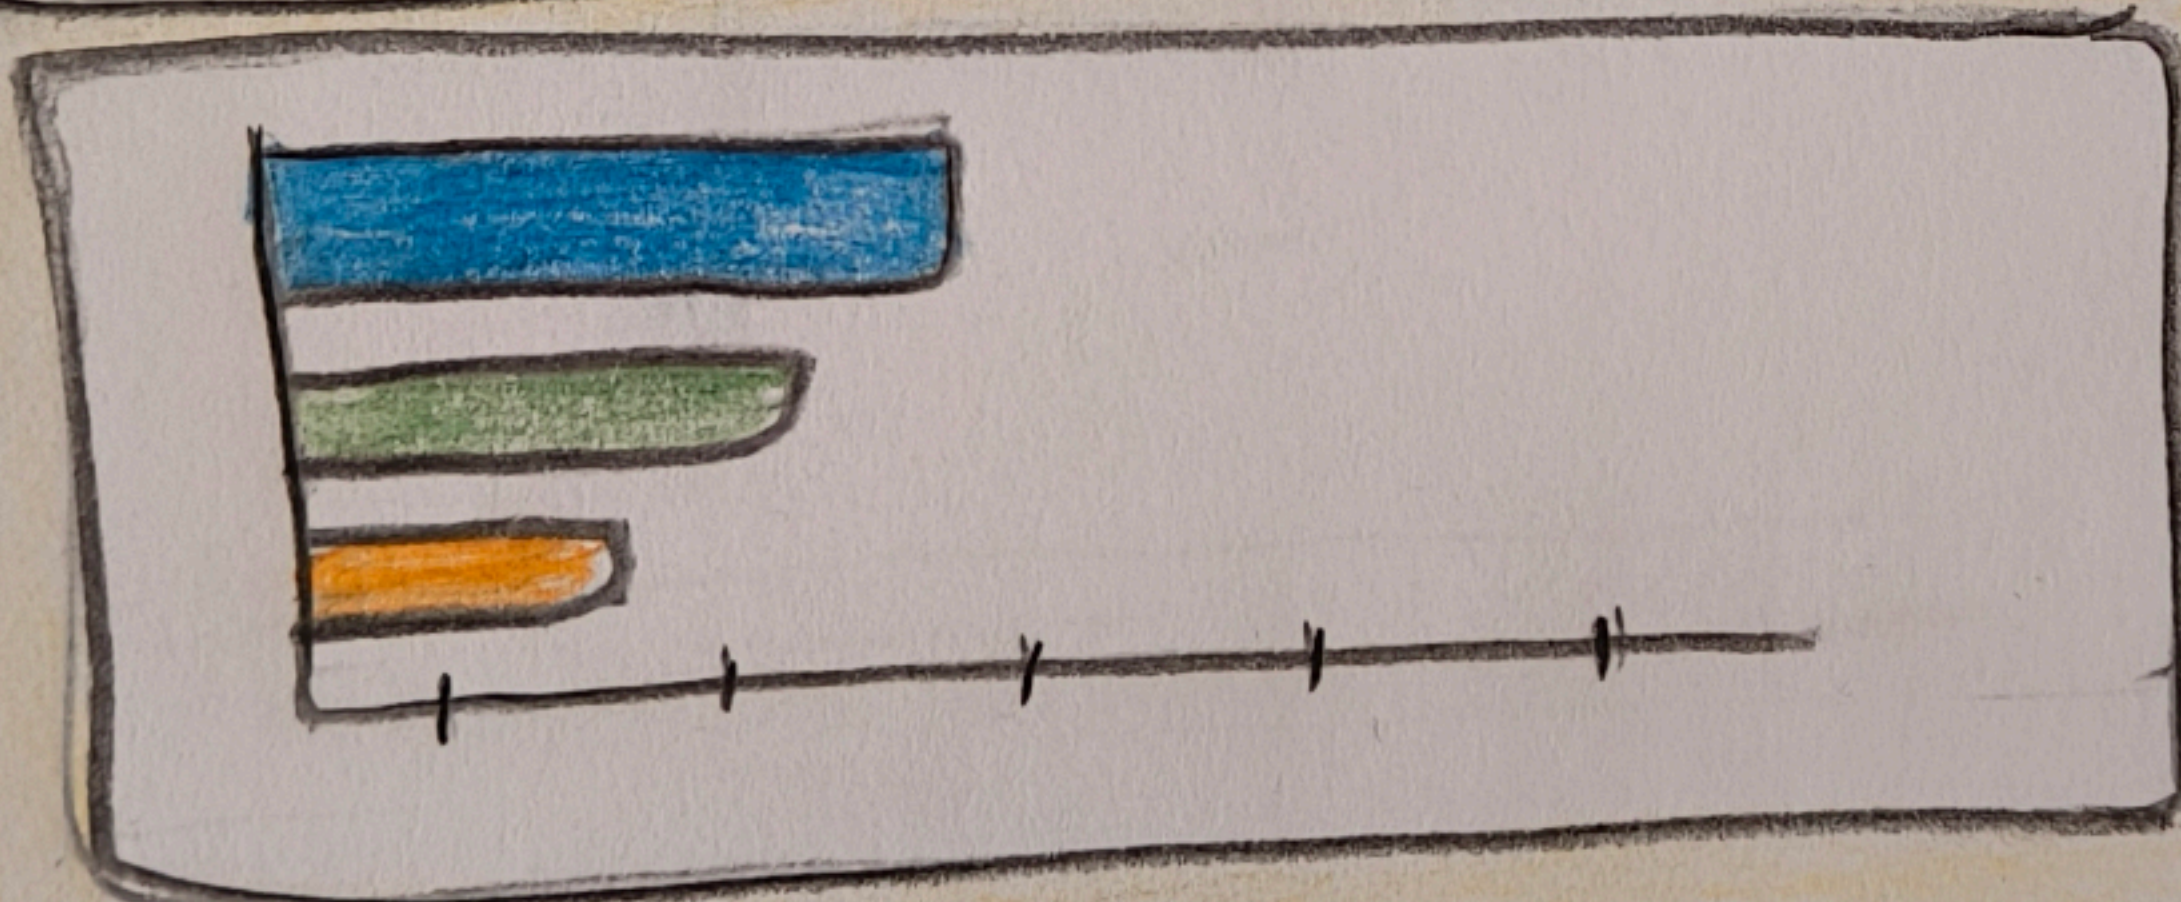

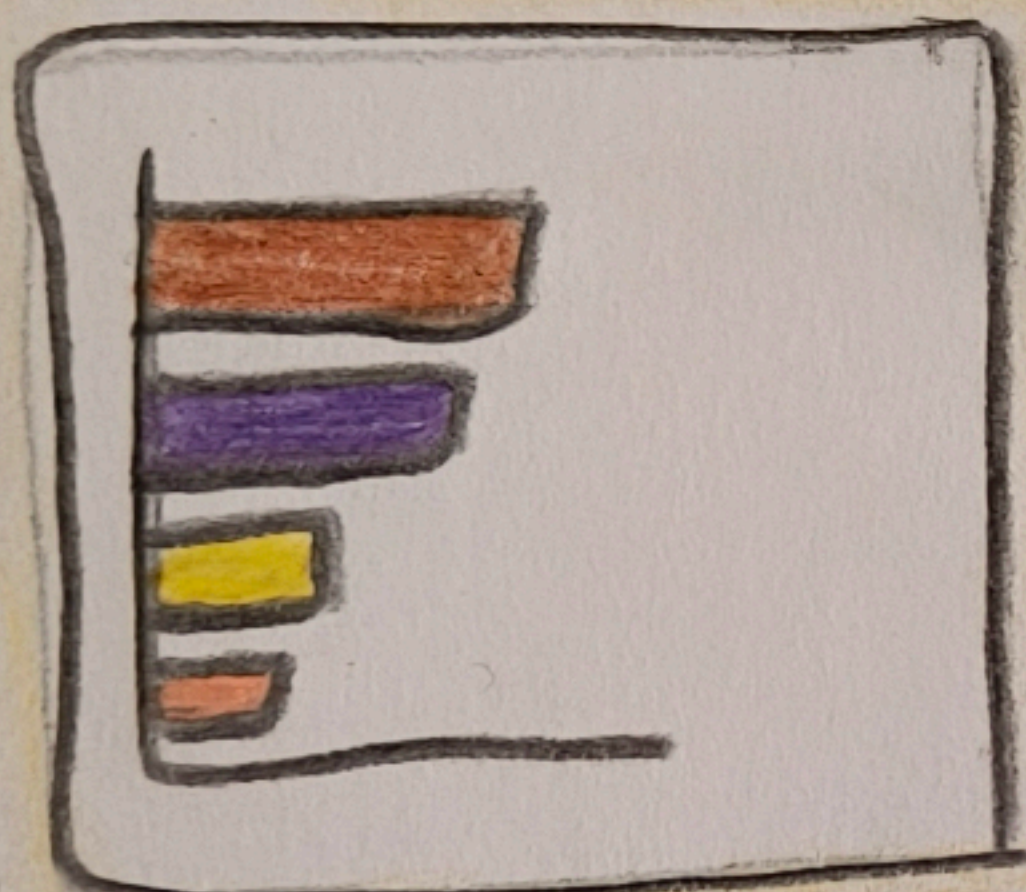

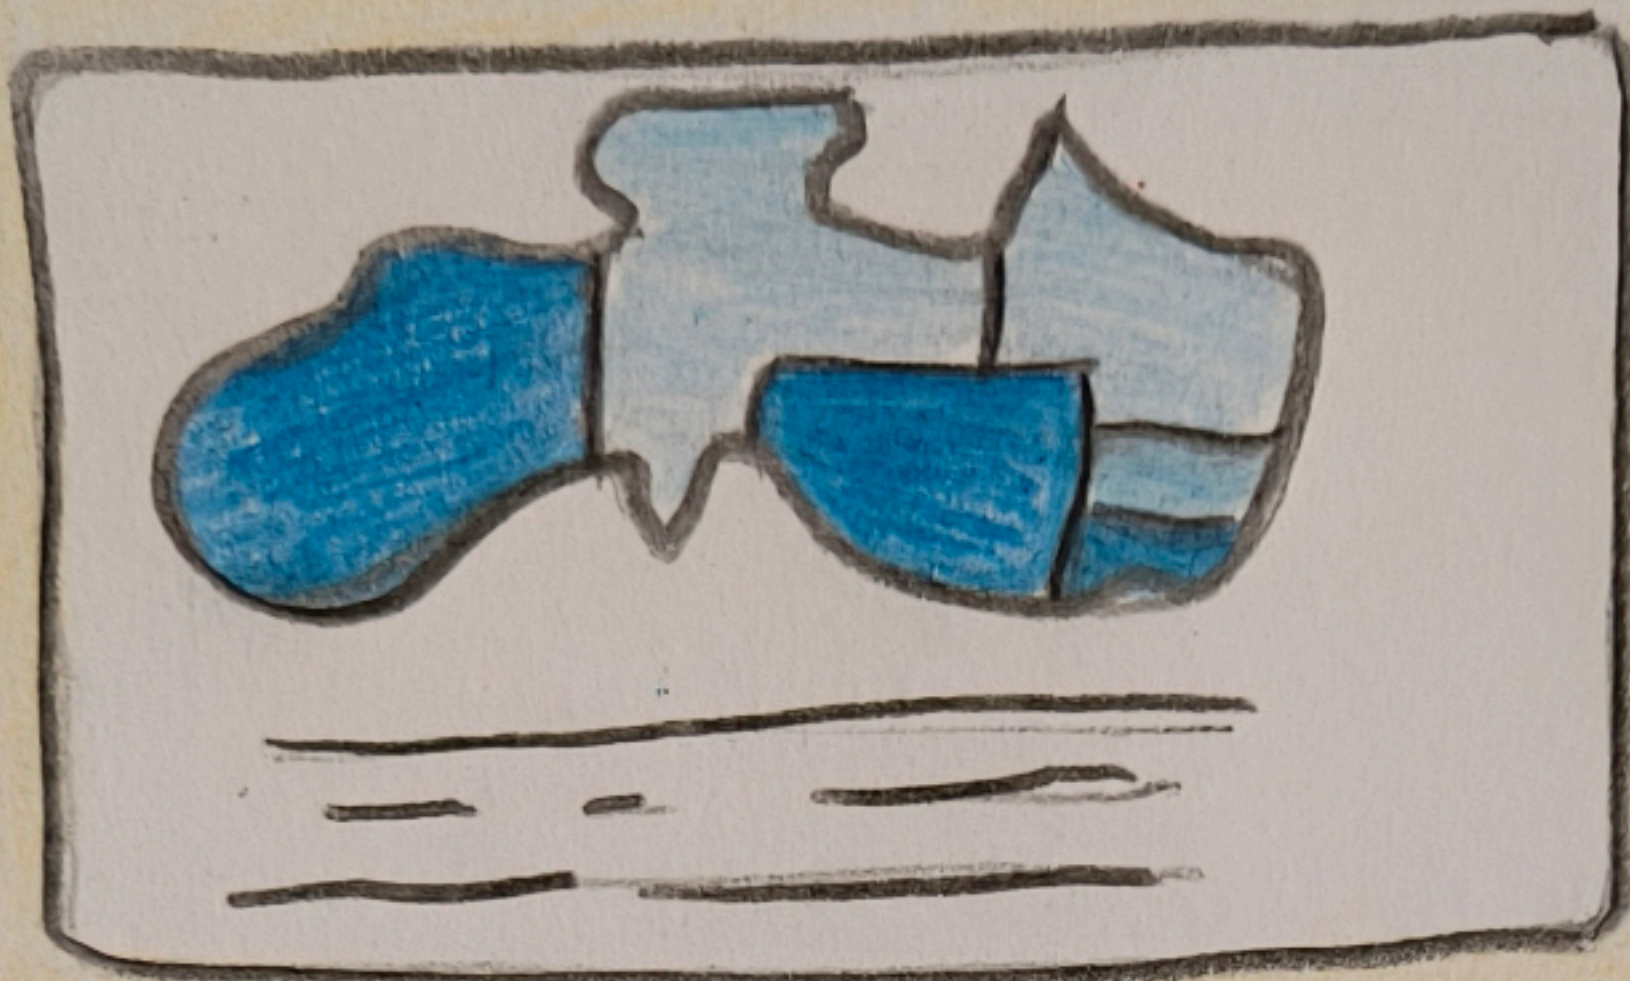

DATASET: aggregate count by (state, year, festivals)

Sheet 4

Name: Alin

ID: 34624896

FESTIVAL FOOTPRINT

FOCUS: The essence is a guided overview that answers where, what, when, and who leads with minimal cognitive load.

SPECS: 3-4 Vega-Lite JSONs

ANNOTATIONS: 2-4 per panel; short, declarative.
